13.5 PERCENTILE Vs PERCENTAGE

A percentile rank tells how well a candidate did in comparison to other candidates, while a percentage rank explains how well a candidate did in the test itself. Percentile never gives the detail of the marks that you have scored instead it just tell you about your merit position among the number of candidates who have appeared in the test with you. For example, a candidate might answer 85 percent of questions correctly and rank in the 99th percentile which means that percentile is not related to the percent of correct answers a student gets on a test.

Percentile ranks are commonly used to clarify the interpretation of marks on standardized tests. For example, a test marks that is greater than or equal to 80% of the marks of candidates taking the test is said to be at the 80th percentile, where 80 is the percentile rank.

Whereas percentage of marks is simply calculated based on the marks obtained out of the maximum marks in the test. For example, a test marks of 75% in a test with a maximum marks of 1000 indicates a marks of 750. The percentage of marks is not affected by the candidate's merit position in comparison to other candidates who took the test.
